PRONTO Xi

ERP FOR MANUFACTURING

The manufacturing ERP your business needs.

One connected system joining bill of materials, production scheduling, shop floor, inventory and financials. Real-time visibility from the first work order to the final invoice.

01	02	03	04	05	06
Work Order	Scheduling	Shop Floor	Quality	Job Costing	Invoice

WHY PRONTO XI

A visibility problem, not a data problem

Most manufacturers have the data. It sits in spreadsheets, whiteboards and standalone systems, which means slow decisions and avoidable waste.

Pronto Xi puts planning, execution, quality and cost on one shared, real-time platform, for discrete, process and hybrid manufacturing.

INDUSTRIES SERVED

- Automotive
- Industrial
- Food and beverage
- Paint
- Building products
- Specialist engineering

THE CHALLENGES

What slows manufacturers down

Disconnected systems

Separate tools for scheduling, purchasing, inventory and financials. A missing component stops a line; a late PO delays a customer.

Pronto Xi: one connected system with shared, real-time data.

BOM and MRP inaccuracy

BOM accuracy is often around 80% when examined closely, causing stock-outs, rework and write-downs.

Pronto Xi: multi-level BOMs with version control and ECO management, plus MRP netting off inventory and open POs.

Manual scheduling

Paper run sheets, whiteboards and verbal handoffs. Bottlenecks are seen only after the damage is done.

Pronto Xi: finite capacity scheduling and drag-and-drop planning with real-time conflict warnings.

Compliance burden

WHS obligations, customer quality requirements and ESG reporting add record-keeping every year.

Pronto Xi: built-in quality management and automatic shop-floor data capture.

THE SOLUTION

Six modules. One shop floor view.

01 ### Production Planning

Plan capacity across lines, cells and sites. MPS sets the build plan up to 12 to 14 months ahead; finite and infinite CRP create detailed work-centre schedules.

02 ### Bill of Materials and MRP

Up to 50 sub-assembly levels, phantom assemblies, alternate components and full ECO management. MRP orders only what is needed, when it is needed.

03 ### Shop-Floor Data Capture

Operators clock jobs on and off, record quantities and scrap, and flag quality issues on a tablet, scanner or PC, with no double entry.

04 ### Quality Management

Inspections, non-conformance reporting, certificates of compliance and corrective-action tracking, supporting continuous improvement and certification.

05 ### Real-Time Cost and Margin

See the cost of every job, product and customer as work happens. Labour, materials, overhead and variances post directly to the General Ledger.

06 ### Asset and Plant Maintenance

Integrated maintenance management with detailed schedules to reduce failures and unplanned downtime, keeping assets available for production.

CAPABILITIES

Built in, not bolted on

PLANNING AND ENGINEERING

- Multi-level BOM with version control and ECO management
- Master Production Scheduling (MPS), MRP and DRP
- Inventory, lot, batch and serial number tracking
- Asset and plant maintenance management
- Product configurator for make-to-order, assemble-to-order and engineer-to-order

EXECUTION AND CONTROL

- Finite capacity scheduling and visual shop-floor control
- Integrated purchasing and supplier management
- Quality management, lab testing and non-conformance reporting
- Real-time job costing, variance tracking and integrated financials

INTEGRATION

Connects to your existing shop floor

A full API, EDI and integration toolkit, backed by an Australian-based integration team.

PLCs **MES systems** **CNC machines** **Barcode and RFID** **Weighbridges** **eCommerce**

COMMON QUESTIONS

What is manufacturing ERP software?

A single connected system that manages production planning, BOMs, inventory, purchasing, quality, job costing and financials, so every department works from the same live data.

Is Pronto Xi suitable for discrete and process manufacturing?

Yes. It supports discrete (assembled products, serial and lot tracking), process (recipes, batches, yields, co-products) and hybrid operations.

Can it integrate with existing shop-floor equipment?

Yes. Customers connect it to PLCs, MES, CNC machines, scanners, weighbridges and eCommerce platforms.
